ADVISES

#ADVISE1

Search result pagination is not quite user friendly. As a user it is not easy to navigate between pages. After selecting how many records view page we should be able to see page number and select pages.

TEST NOTES

I touched each of the page items below, but focused mostly on searching with various combinations, filtering and page details. Pagination, case sensitivity, page designs, default values, information bubble controls are also important points of my tests. I checked no network reactions and reconnection reactions about searching. I checked the search field by logging into my Wikipedia account and not logging in.

BUGS

#BUG1

Search in options displayed even if none checkbox checked in 'Search in' filter. There are still filtered options(User, File, MediaWiki, Template, Category, etc)

Steps:

1. Check 'All' checkbox.
2. Uncheck 'Default' , 'Discussion' and 'General Help' boxes.
3. Check Search in options.

#BUG2

A Turkish word "çadır" has been searched with 'TimedText' search in option. There were no results for "çadır" but 'Showing results for çakır. No results found for çadır.' search suggestion showed up. Also there is no search result for suggested keyword "çakır".

Steps:

1. Enter "çadır" keyword to search bar.
2. Check 'TimedText' checkbox as search in option.
3. Click search button.
